

Deploy a Scrapy project with Serverless

1. We should start by installing scrapy

```
pip install Scrapy
```

2. Create a new project named scrapy_serverless

```
scrapy startproject scrapy_serverless scraper
```

Please make sure that you are using a python3 version. If a python2 version is already installed, please consider using a virtual environment.

```
virtualenv -p python3 venv  
source venv/bin/activate  
pip3 install scrapy
```

We should install all the packages within the virtual environment. For instance :

```
pip install pandas  
pip install snowflake-connector-python
```

3. Test the scrapy function

```
scrapy crawl <class_name>
```
